

SunLink Reaches Significant Delivery Milestone in 2007

FOR IMMEDIATE RELEASE:

January 8, 2008 San Rafael CA

SunLink Corporation further consolidated its leadership position in the market for large commercial roof-top PV mounting systems in 2007 by shipping more than 16 MW of its mounting system to nearly 100 projects across the United States.

“2007 was another year of strong growth for SunLink. Based on the unique and compelling features of our product, SunLink continues to be the choice of leading integrators and owners alike for flat roof applications.” said Christopher Tilley, SunLink’s CEO.

About SunLink

SunLink designs, manufactures and markets the solar industry’s most advanced engineered products for integrating solar electric systems into buildings and sites where maximizing electrical output and minimizing site impact are paramount. The company’s flagship product, an aerodynamically designed, non-penetrating module mounting system for flat roofs is the industry’s leading solution for adding PV to commercial buildings. Ease of installation, engineering support, cost effectiveness, and reduced impact on the building are a few of the reasons building owners and facility managers prefer SunLink.
